

STUDENT MANAGEMENT SYSTEM

Operating Manual

WHAT IS THIS?

A simple C++ program to manage student and teacher records. Stores information in computer memory and provides easy menu-based access.

Features:

- Add/view students and teachers
- Search students by roll number
- Automatic grade calculation
- Stores up to 50 students and 20 teachers

HOW TO RUN

1. Open C++ compiler (Dev-C++, Code::Blocks, etc.)
2. Copy the code into new file
3. Save as .cpp file
4. Compile and run

HOW TO OPERATE

Starting the Program:

- Run the program and you'll see a menu with options 1-7
- Type a number (1-7) and press Enter to select

Basic Operation Steps:

1. First add some students using option 1
2. Add teachers using option 2
3. Use option 3 to view all students
4. Use option 5 to search for specific student
5. Use option 7 to exit when done

Navigation:

- After each operation, press Enter to return to main menu
- Always use the menu numbers to navigate

- Program will guide you through each step

MENU OPTIONS

1. Add Student

- Enter: name, age, roll number, course, marks
- Example: Ali_Ahmed, 20, 123, Computer_Science, 85.5
- Grades: 90+=A+, 80-89=A, 70-79=B, 60-69=C, <60=F

2. Add Teacher

- Enter: name, age, subject, experience
- Example: Dr_Khan, 45, Mathematics, 15

3. Show All Students

- Displays all student records with grades

4. Show All Teachers

- Displays all teacher records

5. Search Student

- Enter roll number to find specific student

6. Polymorphism Demo

- Shows programming concept demonstration

7. Exit

- Closes program (all data lost)

IMPORTANT RULES

Input Guidelines:

- No spaces in names (use underscore: John_Doe)
- Enter only numbers for age, roll number, marks
- Each student needs unique roll number
- Marks can be decimal (85.5)

Limitations:

- Maximum 50 students, 20 teachers
- No permanent storage
- Data lost when program closes

COMMON ERRORS

- "Cannot add more": Reached storage limit
- "No students found": Add students first
- "Student not found": Wrong roll number
- "Wrong choice": Enter numbers 1-7 only

Note: This is an educational project demonstrating Object-Oriented Programming concepts like inheritance and polymorphism.
